3D made easy

NumiSoft™ 2011

Noomeo announces NumiSoft 2011, an optimized and 100% controlled 3D process

- Less required preparation time -
- A unique adaptability in the scanner arena -

Toulouse, May 11th, 2011

Noomeo, major player in the field of 3D scanning devices based on vision, reveals today the new version of its software for acquisition and treatment of 3D data: **NumiSoft 2011**.

With this new version, **Noomeo** facilitates even more the life of its customers by reducing the time of preparation. Unique property in the 3D scanner community: the algorithms of **NumiSoft 2011** fit onto scan parts and not the opposite.

"Numisoft 2011 takes full advantage of the strategic focus of Noomeo on the industrial field. We could rethink the usability and the performance by putting ourselves in the place of users and of their concerns", explains Vincent LEMONDE, CEO of Noomeo.

This new version allows also a significant improvement of the quality of the data. **NumiSoft 2011** facilitates the reverse engineering process by limiting the post-processing required in CAD, without making any concessions with the easy and the fast implementation, which are recognized features of **NumiSoft 2011**.

"All our algorithms were revised to give full control on the measurement process. Beyond a drastic improvement of the performances, now, it is possible to estimate and control the scan process from the creation to the merge of points.", tells Ludovic BRETHERS, CSO of Noomeo.

Closely connected to the **3D scanner OptiNum**, **NumiSoft 2011** offers the operator new features for a complete and 100% controlled 3D scan process. From the acquisition to the final optimization, the traceability of data and an export of these data towards all CAD software, **NumiSoft2011** allows a permanent control of the data at each step of its acquisition.

About Noomeo :

Noomeo is an innovative company based in Toulouse (south of France), which develops, assembles and sales 3D innovative scanning solutions in the field of artificial vision. Noomeo created the 3D scanner OptiNum that is based on a unique self-positioning technology and combines projection of a white structured light and images. This technology allows an immediate scan, without any part preparation, differentiating from others 3D scanners on the market based on laser. The main customers of Noomeo are in the industrial fields: aeronautics, automotive and tooling. Noomeo can also provide industrial customers with its expertise in specific developments projects

Noomeo, OptiNum and NumiSoft are trademarks owned by the Company Noomeo.
